Hiring Team

Schema App

Guelph, Ontario

Re: Full Stack Developer

Dear Schema App Hiring Team,

I'm a full stack developer based in Guelph with over 15 years of experience building and maintaining web applications across PHP, JavaScript, and cloud infrastructure. When I came across the Full Stack Developer role at Schema App, the overlap with my daily work—Laravel, REST APIs, AWS, and agile delivery—was hard to ignore. Your focus on structured data and helping enterprise brands earn better search visibility is genuinely interesting to me, and I'd welcome the chance to contribute to it.

In my current role at Skyline, I maintain and extend a suite of WordPress and custom Laravel applications, administer LAMP servers on DigitalOcean, and build REST integrations with Salesforce, HubSpot, and Pardot. On the front-end side I work with the Sage/Acorn theme stack—combining Laravel Blade, React, and Vite—and have explored Next.js independently to build a basic authenticated interface. For automated testing I've written PHPUnit-backed plugins, including a custom post-type subscription system with Postmark email notifications, and I author Salesforce Apex classes with test suites that consistently hit 95–97% code coverage. I've also configured Corporation Schema Markup across Skyline's web properties via WordPress plugins, improving how search engines understand organizational entities—work that maps directly to what Schema App does at scale.

Earlier in my career, I served as Technical Lead at Bailey Creative, where I led a small development team, conducted code review, and managed a portfolio of WordPress and Shopify sites. I configured LocalBusiness, Service, FAQ, and additional schemas for client sites, giving me early hands-on experience across a broad range of schema types. Before that, at Adknown, I oversaw 50+ web properties, led sprint planning while managing a cross-functional team, and migrated infrastructure to AWS. I'm comfortable in agile environments, writing documentation, and communicating across technical and non-technical stakeholders—all things the posting calls out explicitly.

I want to be upfront: I haven't worked with Vue.js or Docker in a professional context, and GraphQL has been on my reading list. Rather than simply flag those gaps, I built a Vue 3 SPA featuring dynamic routing, filterable project cards, and FifaScope, a live GraphQL country explorer enriched with FIFA World Cup Rankings. The repo is at github.com/justinjoyce/schema-app and a live version is at schema.livetesting.ca. It's the clearest way I know to show that I close gaps by shipping, not just studying.

Schema App's emphasis on a growth mindset and learning openly resonates with how I approach my work. I'd be glad to talk about how my experience translates to your team's needs. Thank you for your time and consideration.

Sincerely,

Justin Joyce

PROFESSIONAL SUMMARY

Full stack developer with 15+ years of experience building, maintaining, and deploying web applications across PHP/Laravel, JavaScript frameworks, and AWS cloud infrastructure. Proven track record leading small teams, conducting code reviews, and delivering secure, testable, well-documented code in agile environments. Experienced with REST API integrations, Salesforce Apex development, PHPUnit automated testing, Composer dependency management, and modern front-end tooling including React, Webpack, and Vite. Hands-on experience implementing JSON-LD Schema Markup (Corporation, LocalBusiness, Service, Product, and FAQ) across enterprise and agency web properties. Quick to adopt new technologies and committed to building secure, scalable, testable, and maintainable code.

CORE SKILLS

Back-End	PHP (Laravel, Symfony), MySQL, PostgreSQL, MongoDB, Node.js, REST APIs, GraphQL (learning), Salesforce Apex, PHPUnit, Software Architecture Principles
Front-End	JavaScript (ES6, React, Next.js, Angular, jQuery), Familiarity with Vue 3, HTML5/CSS3/SASS
Build & Manage	Vite, Webpack, Yarn, Composer, NPM, NVM, Git
Containerization	Docker (learning), containerized development environments
Cloud & Infra	AWS (EC2, RDS, S3, Lambda, CloudFront, IAM), DigitalOcean, WHM/cPanel, DNS, CI/CD, Deployment Automation
CMS & E-Comm	WordPress (Sage/Acorn theme stack), Drupal, Shopify, SilverStripe
Integrations	Salesforce, HubSpot, Pardot, Constant Contact, Postmark API, CREA RETS
Analytics	Google Tag Manager (GTM), Google Analytics 4 (GA4), AdWords, Schema Markup / JSON-LD structured data, SEO, performance optimization
Security & Access	OWASP vulnerability mitigation, AODA/WCAG 2.0 compliance
Leadership	Team direction, code review, mentoring, sprint planning, retrospectives, and daily stand-ups

PROJECTS

Vue.js SPA — github.com/justinjoyce/schema-app · schema.livetesting.ca
Built with Vue 3, Vite, and @urql/vue, featuring filterable project cards, dynamic routing, and FifaScope — a live GraphQL country explorer enriched with FIFA World Cup Rankings.

PROFESSIONAL EXPERIENCE

Web Developer | Skyline Group of Companies, Guelph, ON *Sept 2019 – Present*

- Lead full-stack development across multiple Skyline web properties and internal applications utilizing Ubuntu, Apache, PHP, and MySQL in a fast-paced environment.

- Administer and maintain LAMP web servers on DigitalOcean, managing upgrades from Ubuntu 20.04 to 24.04; conduct OWASP threat assessments and implement mitigation strategies.
- Work extensively with the Sage/Acorn WordPress theme stack (React + Laravel Blade), managing front-end builds with Webpack and the subsequent migration to Vite.
- Develop and maintain an encapsulated WordPress plugin with automated testing (PHPUnit), enabling custom post-type subscriptions with email notifications via the Postmark API.
- Build and maintain REST API integrations with Salesforce, HubSpot, Pardot, and Constant Contact to enhance CRM automation.
- Author custom Salesforce Apex classes and test suites, consistently achieving 95%+ coverage.
- Initiate pull-request reviews, maintaining high standards for code quality, security, and maintainability.
- Configure Corporation Schema Markup across Skyline web properties via WordPress plugins, improving search engine comprehension of organizational entities.
- Spearhead AODA accessibility initiatives across public web properties using the Monsido platform.
- Mentor co-operative students, coordinating tasks and ensuring quality standards.
- Explore Next.js independently, building authenticated web interfaces and expanding front-end capabilities.

Technical Lead | Bailey Creative Inc., Guelph, ON

Feb 2018 – Sept 2019

- Directed technical operations across multiple concurrent client projects; allocated resources and provided hands-on code review.
- Supervised and mentored small development teams in a fast-paced agency environment, maintaining standards of quality and efficiency.
- Migrated a suite of LAMP servers from LiquidWeb (WHM/cPanel) to DigitalOcean.
- Managed DNS across a large WordPress, and Shopify portfolio.
- Developed advanced features using Laravel, Angular, Bootstrap, and additional tools.
- Configured custom JSON-LD Schema Markup (LocalBusiness, Service, Product, and FAQ types) across client web properties to improve structured data coverage and search visibility.
- Managed Google Merchant, Analytics (GA4), AdWords, and Tag Manager (GTM) accounts to optimize client digital presence, configuring conversion tracking and remarketing campaigns.
- Integrated the CREA RETS API for automated real estate property data imports.

Web Application Developer | Adknown Inc., Guelph, ON

Apr 2013 – Dec 2017

- Supervised a multidisciplinary team building cross-platform Unity and Java mobile apps, managing recruitment, sprint planning, task prioritization, and QA to deliver polished products.
- Designed and implemented JavaScript-based analytics tools to filter malicious web traffic.
- Oversaw development and deployment of 50+ web properties built on WordPress and Drupal.
- Managed AWS infrastructure through a full stack migration from RHEL/Apache/Varnish to Amazon Linux/Nginx; engineered a custom Node.js solution deployed via Lambda to automate server management and improve deployment workflows and uptime.

Software Engineer (Concurrent Contract) | Dalhousie University, Halifax, NS *Sept 2010 – May 2018*

- Designed, implemented, and maintained Daedalus, a curriculum-mapping application for the Faculty of Computer Science.
- Collaborated with Dalhousie Medicine and Calgary Medicine to deliver customized platform versions aligned with each faculty's requirements.
- Transitioned legacy Drupal 6 systems to Drupal 8 with Symfony; automated database backups using Perl and Crontabs, with source code managed via SVN.

EDUCATION

Bachelor of Computer Science (Co-op Program)

Dalhousie University, Halifax, NS
